JOHNNY WONDER

JOHNNY WONDER

Q. "HOW DOES A REFRIGERATOR WORK?"

NANCI KESNAN, OF OCEANSIDE, CA, WINS A PRIZE FOR THIS QUESTION.

A. A refrigerator doesn't use ice to cool itself. Instead, it produces cold with a liquid cooling agent called a "refrigerant." It works this way: the liquid refrigerant vaporizes (changes to a gas) as it circulates through coils alongside the refrigeration compartment. As a vapor, the refrigerant draws off the heat from items in the refrigerator, thus reducing their temperature. The vapor is then passed at high pressure through a condenser, where it returns to its liquid form, and continues its cooling cycle. A common refrigerant in home refrigerators is called "Freon."

You can win a World Almanac if your question is selected. Send your name and age to: JOHNNY WONDER, c/o this newspaper, P.O. Box 1280, Santa Cruz, CA 95061.
